

Part of every payment gets invested.

For people paid in USDC. The moment it lands, before you spend it.

THE PROBLEM

I get paid 400 USDC. By month's end, I've invested 0.

I'm a freelancer in Argentina. Like millions of people around the world, I get paid from abroad in USDC, whenever they pay me. My plan was always to invest whatever was left.

Day 3

400 USDC lands

A client abroad pays for a job.

Day 5

Rent

The first thing to go.

Day 12

Card and bills

What's left keeps shrinking.

Day 30

Invested: 0

Nothing was left. Nothing ever is.

WHAT I REALIZED

The problem isn't the money. It's the moment.

Invest what's left

It comes at the end of the month, when there's nothing left. And investing on the same day every month assumes a salary freelancers don't have.

Invest when you get paid

There's only one moment when there's always money: when it lands. That's when your share is set aside, before rent.

CAMALOTE

Set a rule once. Every payment follows it.

What share

10, 20 or 30% of every payment.

What for

A goal with a name: the trip, a new laptop, a safety net.

Where

The S&P 500, companies before their IPO, or dollars that earn.

THE AUTOMATION

An AI agent does the work for you.

1 It sees you got paid

Within seconds, at any hour.

2 It sets your share aside and invests it

In what you chose, and it stays in your account.

3 It tells you what it did

"Bought 120 USDC of S&P 500 for The trip."

You give it permission, with limits. It can only invest what your rule says. It can never withdraw or move your money. Turn it off anytime.

WHY NOW

The three pieces only now exist together.

2x

growth in real stablecoin payments in 2025: salaries, invoices and remittances. Money already arrives in digital dollars.

6x

growth in tokenized stock volume on Solana: \$4.9B in the first half of 2026.

2026

agents can sign inside a bounded permission. Before, you had to remember and press the button.

MARKET

Built for anyone paid in USDC. Starting in Argentina.

TAM · World

\$390B

in real stablecoin payments in 2025: salaries, invoices and remittances.

SAM · Latin America

\$39B

a year, if the region weighs the same as in the rest of crypto: about 10%.

SOM · Argentina

\$7.8B

a year paid in stablecoins to freelancers working for clients abroad. That's where we start.

First-year goal: 1% of that market running through a Camalote rule.

BUSINESS MODEL

We only earn when your rule buys.

0.45%

per stock purchase, never more than 0.50 USDC.

0.10%

on dollars that earn.

0

to sell or withdraw. No subscription, no hidden spread.

It's a volume business: every payment is a purchase. **Scale comes from platforms that pay in USDC** and offer Camalote to the people they pay.

The first twenty, one by one.

1

Communities paid in USDC

We start at Superteam Argentina, where bounties are paid in USDC. Then chapter by chapter, country by country.

2

Ten minutes with each one

"Give me ten minutes and your next payment invests itself."

3

Platforms that pay

Whoever pays in USDC offers Camalote to whoever gets paid. That's where the scale is.

TEAM

I built what I needed.

- Fernando, founder. Fullstack developer.
- Four years at Global Hitss building Smart TV streaming for Claro Video.
- Founded Tuneport: music where fans earn by curating new artists.
- Looking for a growth cofounder to take Camalote to communities and platforms that pay in USDC.

My next payment already has a destination. Yours can too.

Pay yourself first. No more remembering.

Scan and try it

camalote.vercel.app

We don't hold funds, we don't recommend, and each issuer sets its countries.

Non-custodial

Each user has their own account. Camalote never holds the money and can't withdraw it.

Your rule, not advice

We execute the rule the user sets, on third-party protocols. We don't recommend assets.

Each issuer, its countries

Stocks: not in the US, UK, Canada or Australia. Pre-IPO, Treasuries and loans: not in the US either. Argentina isn't excluded by any of them.

Before investing, every user confirms they don't live in an excluded country; without that, nothing is invested. **What's missing**: a legal opinion on whether executing the rule requires registering as a PSAV with Argentina's CNV. It's the first thing we fund.
